## Transducer Evaluation Report

Mfg.: ATL Model: C4-2 S/N: 0018VW  
 Customer: Miami Valley Hospital Phone Number: 937-208-2896 Fax:  
 Address: One Wyoming Ave. Contact: Jason Wolber  
 City: Dayton State: OH Zip: 45409-  
 Test Date: 4/14/03 10:14 AM Purpose: Customer Evaluation  
 Dx/Comments:

Mean: 0.697 Max: 0.824 Min: 0.012 Std Dev: 0.144 Gain: 8 dB

Mean: 457.463 Max: 478.485 Min: 252.002 Std Dev: 41.114

454.365 Max: 616.061 Min: 0.000 Std Dev: 96.596

ean: 3.015 Max: 3.257 Min: 0.000 Std Dev: 0.609

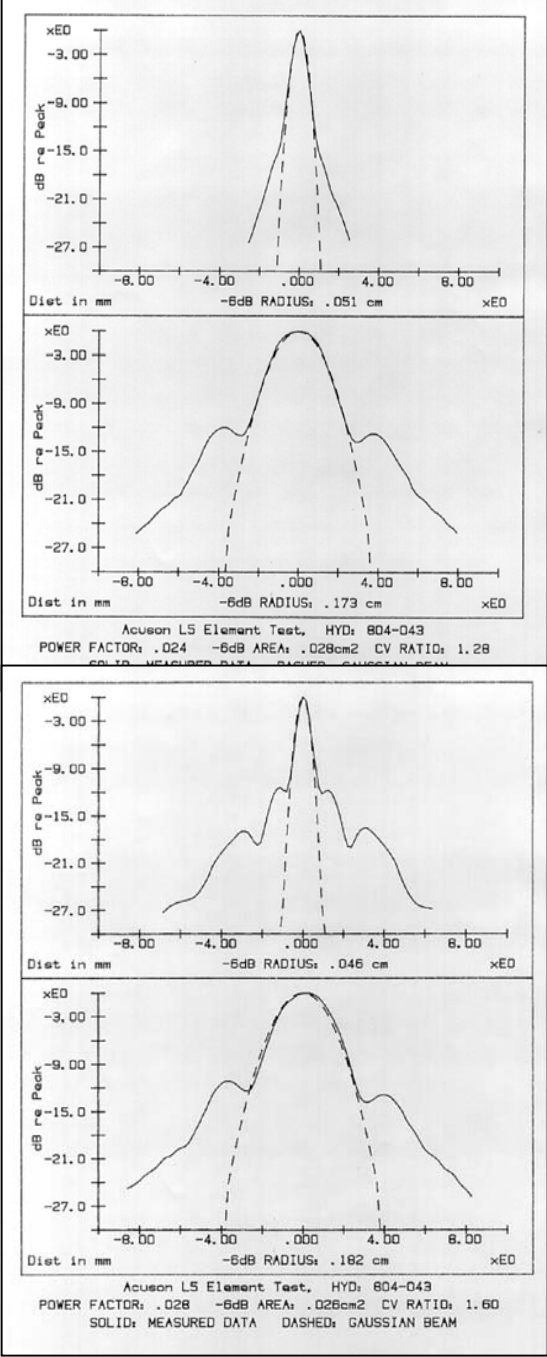

ean: 0.600 Max: 0.684 Min: 0.000 Std Dev: 0.123

“...if element-to-element uniformity is not good enough, we effectively create a random array with random element spacing. Grating lobes are not well defined in this case; their angles are also random...”

Joe Guess, Ph.D.  
*Acoustic Noise from Arrays is Grating* - 1993

*"Sidelobes of the beam can also allow interference from flow outside the vessel under interrogation and may change the spectral mean velocity."*

Bjorn Angelsen, Doppler Ultrasound in Cardiology, 1985

Acuson L5 two dead  
elements side by side  
(#'s 64 & 65)

Courtesy of Dr. Evan Boote – University of Missouri - Columbia

# Initial Results

57 Probes from the UW-Hospital Department of Radiology were tested

Scanner	# of probes tested	>2 “bad” elements	>5 “bad” elements
ACUSON Sequoia (2 systems)	18	7	3
ATL HDI 5000 (3 systems)	18	4	2
Philips iU-22 (4 systems)	15	3	2
GE Logic 9	6	0	0

**If you knew a piece of equipment was broken  
and produced questionable data,  
would you allow it to be used?**

## The Ultrasound Quality Shuffle

### **Clinician:**

“ We rely on the OEM service engineer  
to tell us the system is working correctly”

### **OEM:**

“ We rely on the clinician  
to tell us if they are having  
an imaging or Doppler problem”

**He relies on good aim**

# The Nickel

**Hand Held Electro-Acoustic Test Device**

## **Intended Use:**

- 1) Verify transmission from the elements within an array**
- 2) Verify reception of an acoustic signal from the Nickel**

## **What Modes will the Nickel Signal be Seen on the System Monitor?**

- 1) B-mode, along with various special processing schemes such as:**
  - a) SonoCT (spatial compounding)**
  - b) 2<sup>nd</sup> Harmonic Imaging**
  - c) Dynamic Focusing**
- 1) M-Mode**
- 2) PW Doppler**
- 3) Color Flow**

# Sample Probe – Acuson L5 on 128xp10 with NTHI

**Linear and Curved Linear use a “walking aperture” to form the acoustic lines**

**Spatial Compounding - SonoCT**

# Advanced Development Work

$$E = MC^2 \pm 3dB$$

# Synthetic Probe

## **Intended Use:**

- 1) Verify appropriate signal levels from the transmitters of the system for each mode**
- 2) Verify reception, processing and accuracy of display of various calibrated acoustic signals from FirstAssist**

## **Will Test and Establish Baseline for:**

- 1) B-mode sensitivity, accuracy and functional dynamic range**
  - a) various operator selectable calibrated signal levels**
  - b) operator variable frequencies (test 2<sup>nd</sup> Harmonics, etc)**
  - c) operator selectable variable aperture**
  - d) signals with known spatial resolution characteristics**
- 2) PW, Color Flow and CW Doppler**
  - a) known calibrated velocities**
  - b) operator variable sensitivity settings**
  - c) known color registration**
