AbstractID: 7991 Title: Practice Performance Improvement

Introduction

Practice Performance Improvement is a key component for analyzing and improving the practice of medical physics. It is also an important component of the maintenance of Certification Process for physicists certified by the American Board of Radiology. In order to use Practice Performance Improvement effectively physicists should have training in the techniques available. This session will provide the necessary training. The session is structured as follows:

Introduction
Practice Performance Improvement - Techniques and Methods
Application of Practice Performance Improvement in Radiotherapy
Examples of Practice Performance Improvement Projects from Diagnostic Radiology, Nuclear Medicine and Radiation Therapy
