AbstractID:8440Title :Empiricalinve stigationof f lat-panelima gersincorporatingh ighefficiency,se gmentedB GOandCs I:Tldete ctors forradiotherapyimaging

Purpose: Megavoltagea ctivematrix flat -panelimagers (AMFPIs) are routinely usedfor portalimag inginexter nalbea mradiotherapy. However, conventiona IMV AMFPI s are inefficient, utilizing only $\sim 2\%$ of the inc ident radiation, which leads to a detective quantum efficiency (DQE) of only ~1%. Re cent the oretical studies have shown that incorporationofthick, segme nteds cintillating detectors in MVAMFPI scansignificantly increase DQE performance, leading to improved image quality at low dose a nd the possibility for dos e-efficient, c one-beam c omputed tomography (CBCT). Method and Materials: Building upon the findings of our earlier studies, four prototype AMFPI s haverecentlybeen constructed, each consisting of a segmented BGO (11.3 mmthick) or CsI:Tl (11.4,25.6and40 .0mm thick)detec torcouple dtoanindire ctdetectionf lat-panel array. Ea ch det ector consists of a matr $ix of 120 \times 60 sc$ intillator elements at 1 .016 mm pitch, covered by abla ckor mirror to preflector. X -raysensitivity, MTF, NPS, D QE and phantom images were obtained for each prototy pe using a 6 MV photon be am at extremelylowdoses(e.g., 1 be ampulse, e quivalent to 0. 028MU). Results: The BGO prototypeshowsbetter M TF(~20% at the Nyquistfrequency)thanthe Cs I:Tl prototype at similar thickness. The m easured DOE(0) at 1 bea m pulse for the BGO and the three CsI:Tlprototypes were~19%, 12%, 19% and 23%, respectively. Moreover, the BGO prototypeoffershighe rDQEvalue sc omparedtot heCsI:Tlprototypes overmostof the spatialfre quencyrange.Image sofac ontrastde tailphantomusingthe BGOpro totypeat 2b eam pulses are compara bletothatobtained from a conventionalAM FPI with18tim es moredose. Conclusion: PrototypeA MFPIsemployingthick, segmentedBGO andCsI:Tl detectors offersignific antim provementinimage qualityate xtremelylowdoses, le ading tothepossibili tyofsofttissuevisualizat ionusingMVCB CTa tclinica llypracticaldoses.
