In the January 7th issue of the AAPM e-News, we reported that beginning January 1, 2016, the National Correct Coding Initiative (NCCI) would no longer allow CPT codes 77295 and 77300 to be reported together:

**77300**: Basic radiation dosimetry calculation, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by the treating physician.

**77295**: 3-dimensional radiotherapy plans, including dose-volume histograms.

Based on input from multiple professional societies, CMS will delete this code edit effective July 1st. The deletion will be retroactive to January 1, 2016, the implementation date of the edit. CMS will also revise the *National Correct Coding Initiative Policy Manual for Medicare (Medicaid) Services* in the 2017 version of the Manual.
